

Hammad points to remember for designing in future ALWAYS:

1. For one task, all images/videos must be cropped in exactly the same size. Video shouldn't be in different orientation than the other images in same task. If its all images, they must all be in same orientation.
2. Text should always be very clearly visible
3. Avoid having any element near boundaries
4. Stick to pastel colors. This color palette was approved. We have to stick to zisfone main colors but we can use lighter tones. Text will be with black on light pastel backgrounds.

5. For mp4s make videos 4 seconds so instagram and pinterst accept it too.
6. My fav fonts. We should always use one of the following fonts in all images:
 - Josefin Sans
 - Caviar Dreams
 - Roboto
 - Louis George Café
 - Champagne & Limousines
 - Brood
 - Cream
 - Comfortaa
 - Biko
 - Quicksand
 - Geo Sans Light
 - Modern Sans
7. In same task, all images must be very consistent. Heading & paragraph sizes & colors on every image should be the same. On swipe, there shouldn't be noteable differences in images.

8. Avoid black colored backgrounds & buttons. I always prefer white to black. I prefer white background images also. White & light colors are modern, minimalistic and modern, whereas dark colors are negative, old-style & too loud/bold.

Points for me to remember:

- Zisfone USP/edge is: No contract, no credit check.
- Always edit properly before sending Hammad. Make sure all text/info/requirement is clear.

SAMPLE COMPETITOR PAGES:

<https://www.instagram.com/purplecowinternet/>

TASK1:

We have to make 9 IMAGE CAROUSEL POST. All images will be swipeable.

IMAGE 1: Here's why you need our wifi hotspot device: (device, swipe right gif)

IMAGE 2: Internet with you everywhere

IMAGE 3: Stay connected with your friends & family

IMAGE 4: Work uninterrupted

IMAGE 5: Connect up to 10 devices

IMAGE 6: Reliable internet speed

IMAGE 7: Doesn't drain your device battery or data

IMAGE 8: Connectivity options best suited for you: 3G/4G/5G

IMAGE 9: Great price deals available

IMAGE 10: Contact us today for our Titan Wifi Hotspot device. All contact details there.

TASK 2:

IMAGE 1: Are you looking for peace of mind when you're out traveling?

(scenic photo)

Swipe right GIF.

A human looking into the screen.

IMAGE 2: Are you struggling with internet speed especially when you're on the go?

Swipe right GIF

IMAGE 3: Our Titan Wifi Hotspot device is the right solution to your problems. Call now for more details.

TASK 3:

IMAGE 1:

Are you tired of paying high cell phone bills to your carrier?

IMAGE 2:

We offer cell phone services for as low as \$15.99 per month

Read caption for more details.

Caption:

Are you tired of paying high cell phone bills to your carrier? Well, don't worry anymore. Zisfone is offering cell phone services for as low as \$15.99 per month. The package will give you unlimited talk & text minutes and 2 GB internet data, which can be increased according to your need.

The best part of this plan is that there are no hidden contracts, no commitments and no shipping cost as well. The sim will be delivered to your home and we will help you in activation and yes, you can keep the same number as well. Sounds great, right!

TASK 4:

IMAGE 1:

Our Prepaid Service packages with free sim card will make you want to switch to us.

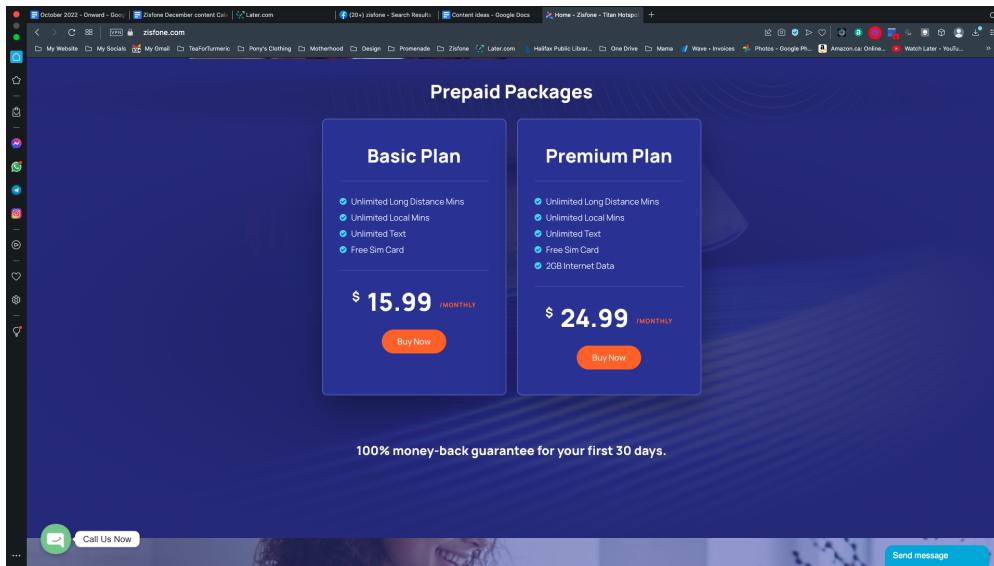

(image of a person grinning or winking with a cellphone in his hand)

Swipe to see our rates ->

100% money-back guarantee for your first 30 days. (at the bottom of the image)

IMAGE 2:

The following prepaid packages plan in an attractive layout.

TASK 5: WHY CHOOSE US

IMAGE 1:

Let us tell you
what makes us different
Swipe (Arrow to the right)

IMAGE 2:

Affordable Price
We have affordable price for low income family, middle-class family and for business.

IMAGE 3:

Professional Team
We have professional team who can assist you better. They know their job well & are able to resolve all your concerns.

IMAGE 4:

24/7 Support
Our Professional team is available 24/7. We make sure we are there for you if you ever need extra support.

OIMAGE 5:

No contract/commitment required
No credit check required
No delivery fees

What internet means to us today?

ITs more than just a connection.

The Internet is a global network of billions of computers and other electronic devices. With the Internet, it's possible to access almost any information, communicate with anyone else in the world, and do much more. You can do all of this by connecting a computer to the Internet, which is also called going online.

100% money-back guarantee for your first 30 days.

Fawad sent the following content in a document:

What is a Hotspot Device? How do they work? and how to find the best hotspot device.

As you follow this article, You will know what a hotspot device is, how it works and what factors you should consider before deciding to buy one.

In today's fast-paced world, no one can imagine living without the internet. It is so integrated with every aspect of our life that It's impossible to start living without it. We can say each person uses the internet, what varies is the medium they use to get the internet connection. While some prefer using mobile data, some prefer using WiFi and some prefer using portable hotspot devices. If you are doubtful about the word "Hotspot devices", the explanation in the next paragraphs might solve your query.

A Hotspot device works by providing a Wifi signal that can be connected to several devices at once. It works on almost any Wi-Fi-enabled device including phones, laptops, cameras, etc. It's reliable, does not drain the battery of your smartphone, can be taken anywhere anytime, provides a more stable connection, does not overuse your data, and can be used for a complete workday without a blur.

Most of the hotspot devices come with an integrated esim which is a form of programmable sim card and is embedded directly into a device. The esim can't be removed and has its own identification number like other sim cards, however, there is an option of changing the esim number to your sim card number.

Through the esim, different data plans can be activated. There are also hotspot devices available that use the data plan of your phone, this means you will first have to connect your phone with the hotspot device in order to get access to the connection without using your phone's hotspot.

Why do you need a Hotspot Device?

According to data shared by the International Telecommunications Union, Cell coverage is reached by 95 percent of the population and it has enabled them to stay connected wherever they are. Using an internet connection while you are at your workplace, or home using a laptop or tablet doesn't seem intimidating because you either have a connection to the internet through Wi-Fi or you opt to use the hotspot feature available on almost every smartphone.

But doing so quickly drains the battery of the phone and also you fall into spending more data if you somehow haven't activated an unlimited data plan. On average, a WiFi hotspot uses 60MB per hour to 800MB per hour depending on the activity you perform. It uses the data which is

included in your phone plan. In such conditions, a Hotspot device is a great medium for accessing a fast internet connection.

Using the Hotspot feature on your phone to get a connection to a laptop, tablet or another phone also gets difficult when you are traveling and want to save the battery of your phone. This situation makes the buying of hotspot devices a compulsory activity.

How does a hotspot device work?

A hotspot device working can be understood as a smartphone with a touchscreen but no advanced features or operating system like a phone. Only capable of taking a mobile connection and then converting it to Wi-Fi or using a 3G, 4G, or 5G connection provided by the internet service providers which is activated through a data plan and is then converted into the Wi-Fi.

If you are wondering “Do portable hotspot devices work anywhere?”, then yes they do. Their working is dependent on the service/network availability of the provider which is just about everywhere in the US these days. The best idea is to check the carrier coverage maps, from here you can get a clear idea of where the device can best perform and work.

Finding the best hotspot Device- Top 3 Factors to Consider:

Research is pretty important especially when you choose to buy something online. From buying a small needle to buying furniture, you must contain knowledge about it. We have gathered some of the essential features that we highly think a hotspot device should have to ensure smooth working.

1: Battery Life of the Device:

We have kept battery life as the first consideration for you because a weak battery is as shallow as not owning a device at all. A good hotspot device is one that offers a commendable battery life to help you meet all of your internet deals.

Since hotspot devices are mainly used to serve the purpose of connecting with several other devices, make sure the battery life isn't quite affected by it. It's understandable that a battery will perform excellently if the hotspot device is connected to 2-3 devices, however with modern

technology integration, there are devices available that best perform even if they are connected to a large number of devices. You might notice a small performance difference but if it's a major one, it's ideal to choose another hotspot device.

The style also plays a part in the battery fittings of hotspot devices. Some devices that look sleek and smart usually have shorter batteries with shorter battery life attached to them. Therefore you must pay attention here as well.

We recommend having a hotspot device with an average battery life of 15-20 hours.

2: Connectivity Capabilities- 3G/4G/5G:

You might be surprised to know that the connectivity capabilities of hotspot devices vary. Some devices offer 3G capabilities while some can handle faster 5G connections. But good features come at a good price, so it's always wise to check if you really need such a fast connection. Check the activities for which you require an internet connection and then choose accordingly.

A device that's compatible with a 4G connection is ideal for you if you want to get things done on a small budget. It can help with performing multiple tasks. You can perform almost any task with both 4G and 5G compatible hotspot devices. The only difference here is the speed.

While you can enjoy faster ultra browsing, downloading, uploading, and less speed interference on being connected to several devices at once, the process will be slower on a 4G compatible hotspot device.

3: The number of devices it can connect:

What's the first thing that comes to your mind when you think of buying a hotspot device? What comes to ours is being able to connect with multiple devices at once. It's the core purpose of a hotspot device besides its portability.

Many hotspot devices can handle 5 connections at once, however, some newer models can also handle connecting 10-20 devices at once. It's entirely dependent on you and how many devices you are planning to connect.

The connectivity to a number of devices for sure has an effect on the pricing strategies of the devices as well so be sure to calculate your devices before you decide to make a purchase.

Zisfone Titan Hotspot Device- Our Best Find for you:

Considering the factors above, we think the Titan Hotspot device is an ideal one for you to use for work, study, traveling, and other personal purposes. It offers a relatively fast and reliable internet connection anywhere you are.

Have a look at its most promising features.

Coverage:

Titan Hotspot Device offers wide coverage and works anywhere in the US and Canada. Its services are provided in areas with At&T, T-Mobile, Verizon, and US Cellular coverage available.

Display:

Titan hotspot device has a 2.4 inches touch screen. It's sleek and stylish and has several screen options like Connections, QR Code, Network Optimization, and Flow protection. Through its screen options, you can also check your data usage.

You will also find a battery icon, a Hotspot icon with a number of devices connected, and signal strength on the screen.

Built-in:

It is engineered to be compatible with 4G LTE GSM mobile networks. Has an integrated eSIM on which different data packages can be activated. It comes with a built-in Dynamic Switching technology which allows you to have congestion monitoring and prioritize instant network

Connections:

Titan hotspot device is engineered to handle 10 connections at once while delivering fast speeds to all of the connected devices.

Battery life:

Titan hotspot device comes with a 3000mAh battery which means it can best perform for 10-12 hours.

The features are interesting aren't they? Do you know you can get it for the lowest possible price right now?

Here's how you can save \$51 if you buy it from Zisfone:

Zisfone is one of the leading and most reliable internet service providers serving to mobilize the world through high-speed internet services. It also has a Titan device available which you can buy right now without having to sign fussy contracts.

You will also be able to get 20GB of data for free for a period of one month. Pay no hidden charges, or shipping costs and get your device for \$199 only.

[Click here](#) for more details.

Zisfone Data Plans for Titan Hotspot Device:

Zisfone provides multiple data plans for high-volume customers for as low as \$75 per month. You can check all of them [here](#).

FAQS:

What is the best hotspot device?

Titan hotspot device is the best hotspot device available. It is a 4G compatible device with a 3000mah battery. 2.4-inch touch screen and various screen options.

What is the difference between Wifi and a Hotspot device?

Wi-Fi is a wireless communication technology. It is used for local area networks. A Hotspot device is one that converts a data signal either received through esim or another phone and converts it to a Wi-Fi signal

Who uses Hotspot devices the most?

Travelers, business owners who are always on the roads, a big family, and anyone looking for a profitable alternative to Wi-Fi needs hotspot devices the most

Can a Hotspot device work without the internet?

No, the hotspot device can not work without the internet. It uses a data signal to working

Do hotspot devices have a battery?

Yes, all hotspot devices come with a battery. The devices have batteries for different milliampere hour

We hope the article managed to help you get an understanding of hotspot devices. Share with Friends! Leave a comment if you have questions.

4.2.6. IPL Applicator Holder
